LETTER OF RECOMMENDATION

for Aleksandr Korshunov

This letter confirms that Aleksandr Korshunov was employed by JSC «Data Storage Center», a subsidiary of PJSC «Rostelecom», from 4 September 2023 to 25 September 2026. During this period, he held the position of Lead Risk and Internal Control Specialist within the Internal Control and Risk function of the Quality and Risk Management Service, where he established himself as an independent, responsible and professionally mature specialist.

His key areas of responsibility included internal control, operational and technology risk, internal reviews and analytics. Aleksandr participated in the assessment of business processes and the company's IT environment, identification and analysis of risks, review of existing control procedures, and development of practical recommendations aimed at addressing identified weaknesses and improving processes.

As part of his responsibilities, Aleksandr contributed to the development of the internal control and risk management framework, analysed key risks and control activities, participated in updating control procedures and performance indicators, and monitored their implementation and effectiveness. He contributed to intra-group management reporting, as well as the preparation of materials for regulatory disclosure and the provision of information to relevant stakeholders.

Another part of his work within the Quality and Risk Management Service was related to the specific operating environment of data centres and critical IT infrastructure. His responsibilities covered overview of service availability, SLA performance, incidents of varying levels of severity, changes in IT and operational processes, procurement and approval procedures, as well as business continuity, disaster recovery and infrastructure resilience. Aleksandr did not limit his work to formal compliance checks; he sought to understand the underlying causes of risk, its potential business impact and the effectiveness of the controls designed to mitigate it.

Aleksandr planned and carried out internal reviews, analysed business-processes and control points, discussed identified issues with business-processes owners and supported corrective actions. His work contributed to the identification of material operational risks, understanding their root causes and developing practical recommendations to address them.

I would also highlight his contribution to the automation of data collection and analysis related to operational risks and control procedures, as well as his analysis of selected operating expense items and revenue drivers. The results of this work helped initiate a review of certain terms of engagement with a number of counterparties and brought to top-management's attention material operational risks with the potential to directly affect the company's financial performance and revenue generation.

Aleksandr has strong analytical skills. In his work, he used advanced Excel, Python and Power BI to analyse large volumes of data, identify deviations and anomalies, automate selected analytical procedures,

build effective dashboards and prepare management reporting. This helped make a number of previously manual tasks more transparent, repeatable and data-driven.

As part of his work with the internal control framework, Aleksandr worked closely with process owners, IT and operational teams, collected and analysed evidence supporting the operation of controls, participated in the annual internal control self-assessment, monitored corrective actions and prepared materials for management.

Aleksandr is able to discuss findings constructively, explain their business relevance and find a reasonable balance between control requirements, operational realities and the practicality of proposed changes. He has demonstrated an ability to look at processes end-to-end and understand the relationship between risks, controls, operational efficiency and business outcomes.

Throughout our time working together, Aleksandr proved to be someone who could be trusted with an assignment from the initial framing of the issue and analysis of data through to the preparation of conclusions and follow-up actions. He learns new processes quickly, works confidently with large volumes of information, structures complex issues well and maintains a calm and professional communication style with colleagues and management.

I would like to thank Aleksandr for his contribution to the development of risk management and internal control processes at JSC «Data Storage Center». His work helped make the control environment more systematic and strengthened the use of evidence and data in the analysis of risks and operational performance. I believe the experience he has gained will be particularly valuable in internal audit and control, risk assessment and risk management, analytics, performance management and strategic development.

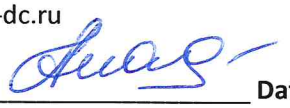

I am pleased to recommend Aleksandr as a strong professional who combines a sound understanding of risk and control with strong analytical capabilities and practical knowledge of technology and operational processes.

This letter is issued by:

Aladysheva Aleksandra

Head of Internal Control, JSC «Data Storage Center»
